Actuarial Services

What is the problem we are trying to solve?

Large corporate groups have long struggled with actuarial reporting; for example:

- Can the expense of employee benefit schemes be predicted?
- How can the benefit cost be measured for **interim reporting** purposes?
- How to **attribute the costs of benefit schemes** to various cost-centres or other attributes?
- Can corporate groups **get a bird's eye view** of the benefit schemes of all the group companies
- Need to **understand the real drivers the actuarial gains and losses**, or re-measurements
- How can the **turnaround time** be reduced?
- How can the time spent by the company personnel during year-end reporting be minimised?
- How to **share the data securely** and ensure that it stays safe?

What is our solution?

NUMEX

- Conceptualised in 2015, and built over two years by IT specialists and actuaries
- Fully cloud-based; offering computational power and immense flexibility to clients

What is it?

- Separate online account for each authorised personnel of your company
- Includes separate accounts for the auditors for direct interaction with Numerica
- A repository of all current and past reports
- A repository of all your data submissions, current and past
- Control your data and assign specific access permissions to individuals
- Advanced analytics reports:
 - **Drill-down reports** - to bring out the real drivers of actuarial gain and loss, or re-measurements
 - **Segment reports** - split of complete accounting disclosures by cost-centre or business unit
 - **Group reports** - providing enterprise-wide views of accounting disclosures across all plans and group companies
 - **Forecasting reports** - providing a projection of employee benefit costs for future interim reporting purposes.
